

Now Offering Cardiac PET/CT Scans

Advanced heart imaging to help detect coronary artery disease with greater clarity and confidence.

Our cardiology team is proud to offer Cardiac PET/CT myocardial perfusion imaging — an advanced, noninvasive test that helps evaluate blood flow to the heart, identify possible coronary artery disease, and support more informed treatment decisions.

Why Cardiac PET/CT?

- ✓ High-quality images for improved diagnostic confidence
- ✓ Helpful when traditional nuclear stress testing may be limited
- ✓ Can be especially useful in patients with larger body habitus or prior inconclusive imaging
- ✓ Measures blood flow to the heart and supports personalized care
- ✓ Fast, efficient, and noninvasive

Who may benefit?

- ✓ Patients with chest pain or shortness of breath
- ✓ Known or suspected coronary artery disease
- ✓ Patients with a prior equivocal or inconclusive stress test
- ✓ Individuals who may benefit from improved image quality
- ✓ Patients whose physicians need additional information to guide treatment

What to expect

1

Your physician determines if Cardiac PET/CT is right for you

2

You will undergo rest and stress imaging, often using medication rather than exercise

3

Your cardiology team reviews the results and discusses next steps

Benefits at a glance

Noninvasive

Advanced imaging

Improved clarity

Personalized heart care
